TPI in Poland

Our company has existed on the Polish market since 1996 and is one of the leaders in the field of active fire protection sprinklers.

Due to our full and professional offer as well as thorough implementation of services, we enjoy the trust of our clients, contractors and workers.

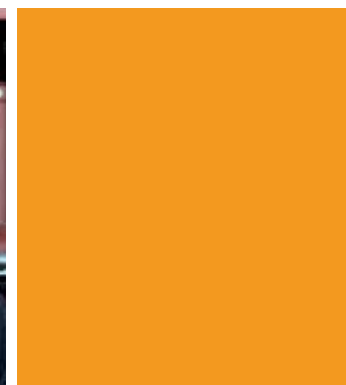

TPI worldwide

Calanbau-TPI Sp. z o.o. and the Fire Protection Solutions Group are part of VINCI, the worldwide leading concessions and construction group.

VINCI counts more than 185.000 people in some 100 countries and has an annual turnover of 38 billion Euro.

Our company boasts many years of experience in the business and is certified as a VdS-approved installer of stationary fire protection systems.

Safety and Security

Our offer

We provide for the following (among others):

- building design, tender design and contractual design
- sprinkler and hydrant installations
- dry and wet sprinkler installations
- water and foam drencher installations
- gas installations
- sprinkler installations
- full delivery and fitting of pumps and containers of water reserves
- monitoring systems
- periodical inspections of installations
- maintenance inspections of power transmission of fire prevention
- pumps
- measurements of output of pumps and hydrants
- we also train staff in the afore mentioned scope

Concept

We offer professional consultation and an innovative approach to solving problems and implementing practical technical solutions concerning fire protection.

Our designers and cooperatives have appropriate qualifications and many years of experience. As a result, we are ready to undertake any design or contractual challenge while offering optimal solutions tailored to the needs and requirements of the client.

Designing

The design office based in Warsaw implements tender designs, building designs, contractual designs and as-built designs of sprinkler installations basing on Polish and international norms. We always provide solutions suited to the type of facility and its purpose and also the demands of the client. Already at the initial stage of design, we cooperate with surveyors and representatives of insurance companies.

We build Trust

Prefabrication

Our prefabrication establishment and warehouse are based in Grodzisk Mazowiecki (about 40km outside Warsaw). The prefabrication of elements – cutting, welding, rifling, reaming and painting – gives the possibility of limiting the time spent on site and guarantees the highest quality of performance and reliability.

Delivery

Ready-made elements of installation are prepared and sent to the location where they are to be fitted, according to the set agenda. It is also possible to warehouse ready-made fabrication and create supplies in accordance to the requirements of the project. Each transport is controlled precisely and packed appropriately.

Fitting

All work connected with the implementation of installation on site are conducted by an experienced and trained group of fitters, who guarantee quality of work in accordance with building norms. Supervision and coordination is ensured by a qualified building manager, who monitors all stages of work, deadlines and safety guidelines.

Technical service and supervision

We offer constant technical supervision and, in accordance with needs, supplementary training concerning the servicing and conservation of appliances.

We include (among others)

- three yearly and annual maintenance inspections of installations,
- maintenance inspections of fire protection pumps,
- the measurement of the output of pumps,
- hydrants within the scope of our guarantee and
- post-guarantee service.
